Security Risk Assessment Tool

The Health Insurance Portability and Accountability Act (HIPAA) Security Rule requires that covered entities and its business associates conduct a risk assessment of their healthcare organization. A risk assessment helps your organization ensure it is compliant with HIPAA's administrative, physical, and technical safeguards. A risk assessment also helps reveal areas where your organization's protected health information (PHI) could be at risk. To learn more about the assessment process and how it benefits your organization, visit the Office for Civil Rights' official guidance.

What is the Security Risk Assessment Tool (SRA Tool)?

The Office of the National Coordinator for Health Information Technology (ONC), in collaboration with the HHS Office for Civil Rights (OCR), developed a downloadable Security Risk Assessment (SRA) Tool to help guide you through the process. The tool is designed to help healthcare providers conduct a security risk assessment as required by the HIPAA Security Rule and the Centers for Medicare and Medicaid Service (CMS) Electronic Health Record (EHR) Incentive Program.

[Download Version 3.2 of the SRA Tool \[.msi - 94 MB \]](#)

All information entered into the SRA Tool is stored locally to the users' computer or tablet. HHS does not receive, collect, view, store or transmit any information entered in the SRA Tool. The results of the assessment are displayed in a report which can be used to determine risks in policies, processes and systems and methods to mitigate weaknesses are provided as the user is performing the assessment. The target audience of this tool is medium and small providers; thus, use of this tool may not be appropriate for larger organizations.
